

IN THE CLAIMS:

Please cancel Claim 1, without prejudice or disclaimer of subject matter, and add Claims 11-21. The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application.

Claim 11 (new): An image processing apparatus comprising:

an input unit, adapted to input image data;

a processor, adapted to perform a job based on the image data input by said input unit;

an operation unit, adapted to display an operation screen and accept a user operation based on the operation screen;

an entering unit, adapted to enter a user ID; and

a controller, adapted to control the operation screen of said operation unit for the job to be performed by said processor based on the user ID entered by said entering unit.

Claim 12 (new): An apparatus according to claim 11, wherein said input unit inputs the image data obtained by reading an image on a document.

Claim 13 (new): An apparatus according to claim 12, wherein said controller controls the operation screen of a reading parameter for reading the image based on the user ID entered by said entering unit.

Claim 14 (new): An apparatus according to claim 11, wherein said processor performs a sending job for sending the image data input by said input unit to a designated destination.

Claim 15 (new) An apparatus according to claim 14, wherein said controller controls a displayed destination list based on the user ID entered by said entered unit.

Claim 16 (new): An apparatus according to claim 11, wherein said controller controls what language is displayed on the operation screen.

Claim 17 (new): An apparatus according to claim 1, wherein said controller controls the number of user selectable items to be displayed on said operation unit.

Claim 18 (new): An apparatus according to claim 1, wherein said controller controls the number of operation screens displayed, for instructing a predetermined job execution to be displayed on said operation unit.

Claim 19 (new): An operation according to claim 11, wherein said controller controls said operation unit for displaying a common operation screen without a user ID being entered by said entering unit.

Claim 20 (new): An image processing method comprising the steps of:

- inputting image data;
- using a processor to perform a job based on the image data input in said inputting step;
- displaying an operation screen and accepting a user operation based on the operation screen;
- entering a user ID; and
- controlling operation for the job to be performed by the processor based on the user ID entered in said entering step.

Claim 21 (new): A physically embodied executable program product for performing an image processing method that comprises the steps of:

- inputting image data;
- using a processor to perform a job based on the image data input in said inputting step;
- displaying an operation screen and accepting a user operation based on the operation screen;
- entering a user ID; and
- controlling operation for the job to be performed by the processor based on the user ID entered in said entering step.
